

How to apply Decal

1) Apply a piece of wide tape to the top of the decal on top of the application tape about ½ inch from the edges, to create a flap.

2) Apply Decal to area of glass in position wanted, and then smooth down the tape

3) Take a squeegee or stiff cardboard and burnish on top of decal.

4) Next Flip up the Decal on the tape hinge you just made, and slowly pull off the Paper Backing of the Decal, making sure all the Decal's small pieces stay attached to the Application Tape (top layer)

5) While holding the bottom of the Application Tape and keeping most of the slack out of it, press the decal down on the Glass and rub it with squeegee or cardboard.

6) Once it is applied to the glass, remove the Application Tape by grabbing an upper corner and pulling at an angle downward. Your done!

(wait an hour before exposing Decal to moisture)
